## Microsoft Software Subscriptions - Availability of Ordering Process

In this release we completed the ordering process for the Microsoft Subscriptions from the Storefront.

1. Your customers and resellers can now order Microsoft subscriptions with **automatic provisioning and invoicing.**

2. They can see the details of the Software subscriptions they purchased in the **Assets sections** in the **Billing** area of the Storefront.

3. In BSS the purchased Azure Reservation will be visible as assets and they will be linked with the customer.

## What's next?

The Azure Reservation integration **will be completed in the next releases** where we will deliver the following:

1. **BSS Ordering.** The account manager will be able to place order for Software subscriptions directly from BSS
2. **Software subscriptions availability for tenant resellers and country tenants.** Support of ordering, provisioning and back-ordering for the Software subscriptions products from your tenants.
3. **Cancellation of Software subscription assets.**

For more details, please check [Ordering Microsoft Software Subscriptions from Storefront](#) and [Microsoft Software Subscriptions Assets](#)

## Resolved Issues

Key	Summary
EXL-7084	Wrong quantity is provisioned in Microsoft partner center when the purchase of licenses is executed from Storefront.
EXL-7231	Cancellation request notifications are not dispatched when the request is placed but hours later
